

PRODUCT INFORMATION SHEET

Puller for disassembling engine valves

Product description

Special designed puller to remove springs in valves. Thanks to its design, it eliminates the risk of damaging the engine head when removing the valves. The puller is mainly used in professional workshops and car services.

Characteristics

- made of high-quality steel, which guarantees its durability and reliability;
- designed for dismantling valves in OHV, OHC, CHV engines;
- a 5-joint lever;
- sleeve adjustable up to 115 mm.
