  - cargo side pocket
  - back pockets.

TWILL fabric, characterised by a diagonal weave that provides extraordinary durability and abrasion resistance, was used to produce REETZ protective clothing. The composition of the fabric is 58% cotton for softness, 40% polyester for greater durability, and 2% elastane to add elasticity, which together provide comfort and freedom of movement. This mixture creates a durable 260 g/m<sup>2</sup> fabric, which means it is solid yet light enough to ensure comfort for everyday use.

PRE-BENT LEG SYSTEM - is an advanced method of designing protective trousers by structurally shaping the legs so that they are naturally curved and profiled, imitating the shape of the legs in movement. This ergonomic design makes the legs fit the body better, offering greater freedom of movement and wearing comfort.
