Detachable pockets in protective clothing offer considerable flexibility in the organisation of the workspace, enabling users to adjust arrangement of tools and accessories according to individual needs. Made of Oxford 300D fabric, they guarantee resistance to damage and long-term use.

OXFORD 300D is a type of durable polyester fabric, which is resistant to abrasion. It is often used in places prone to intensive wear, such as around the knees and elbows or pockets of clothing. Thanks to its durability, the OXFORD fabric is a popular choice for production of protective and outdoor clothing.

WURNITZ protective clothing is made of a **TWILL** fabric, the material known for its twill weave, which gives it exceptional strength and resistance to abrasion. The composition of material is **60% polyester**, ensuring high durability, **38% cotton**, guaranteeing softness, and **2% elastane**, adding elasticity.

This specific blend of ingredients creates a durable material with a **grammage of 220 g/m²**, making it robust and yet light enough to ensure everyday wearing comfort.

WURNITZ elastic clothing is the perfect combination of durability, comfort and safety. Designed for professionals, it provides protection in key areas, without restricting freedom of movement at the same time, which is essential when carrying out precision work.
