

PRODUCT INFORMATION SHEET

Teflon foam gun

Product description

The self-cleaning foam gun is a revolutionary way to use tools for dispensing mounting foam quickly, efficiently, and conveniently. Indispensable when sealing, installing windows and doors, filling gaps in the insulation of partition walls, or insulating walls and roofs, and gluing. The design of the nozzle means that the device does not require cleaning after use. The aluminium structure guarantees that the gun is resistant to corrosion and mechanical damage, providing long-term durability. The body and all major parts of the gun are covered with teflon. It prevents the foam from sticking to it, ensuring comfortable use and long, trouble-free operation. Thanks to its low weight and ergonomically profiled handle with rubber lining, it provides comfort and safety of use, which translates into less hand fatigue during long-term effort and accuracy of work. Thanks to the precise application mechanism and the highest quality materials, the gun ensures even and accurate application of the foam, which guarantees excellent work results. The precision of workmanship contributes to the tightness of the system and no leaks. The teflon-coated nozzle prevents the foam from sticking to it and ensures trouble-free operation for long-term performance of the tool. The gun can be used to apply foam and PU, PUR mounting foam, as well as foam adhesives. The foam gun with the "no clean" function is an innovative technical solution that raises the standards of work comfort and efficiency. Thanks to its advanced design and high-quality materials, it is an excellent choice for professionals and amateurs who value high quality and comfort of use.

Characteristics

Functionality - self-cleaning (no clean); construction material - aluminium, teflon-coated; nozzle material - teflon-coated brass.
